ABSTRACTED-PUB-NO: JP2001247605A

BASIC-ABSTRACT:

NOVELTY - Vinyl chloride (VC) group polymer is manufactured using a polymerization unit (1) equipped with a pipeline (3) for supplying VC or VC and a monomer which can be copolymerized with VC, a pipeline for supplying heated, degassed aqueous medium and a polymerization initiator supply nozzle (2). The nozzle (2) is installed with its end pointing upwards, upstream of cutoff valve (4) to unit (1) and pipeline (3).

DETAILED DESCRIPTION - Vinyl chloride group polymer is manufactured using a polymerization unit (1) provided with a **pipeline** (3) for supplying vinyl chloride (VC) or VC and a **monomer** which can be copolymerized with VC, **pipeline** for supplying heated, degassed aqueous medium and a polymerization initiator **supply** nozzle (2). The **supply** nozzle is installed with its end pointing upwards, upstream of cutoff valve (4) to polymerization unit and **monomer** charge **pipeline**, and supplies the initiator into polymerization machine. An INDEPENDENT CLAIM is also included for the polymerization apparatus of vinyl chloride group polymer.

USE - For polymerizing vinyl chloride group polymer used in pipe, film, industrial board, window frame, wire coating and wrapping film.

ADVANTAGE - Scale formation in the vinyl chloride group **monomer** **supply pipeline** and polymerization initiator **supply pipeline** are prevented by carrying out continuous production of the polymer. Vinyl chloride group polymer is manufactured stably over a long period of time without the generation of fish eye.

DESCRIPTION OF DRAWING(S) - The figure shows an example of the polymerization machine.

Polymerization unit 1

Polymerization initiator supply nozzle 2

Vinyl chloride monomer supply nozzle 3
